

Elevating Telemedicine to New Heights with FIRST TeleView® Remote Patient Monitoring Cart

FOR IMMEDIATE RELEASE – August 3, 2024 – Lockport, NY – Building on its success in transforming telemedicine delivery, First Products Inc. is spotlighting the flagship product in their innovative line of mobile telemedicine carts: the **FIRST TeleView® Cart**. Featured at this year's HIMSS (Healthcare Information and Management Systems Society) trade show in Orlando, Florida, this comes on the heels of the company's recent announcement of its [updated range of telemedicine carts](#), underscoring its commitment to advancing healthcare accessibility and efficacy through technology.

The [FIRST TeleView® remote patient monitoring cart](#) leads the charge in addressing the burgeoning needs of modern healthcare delivery. Engineered with healthcare professionals and patients in mind, the cart is a cornerstone in virtual healthcare, ensuring that the distance between healthcare providers and patients is bridged with the utmost care and efficiency.

The FIRST TeleView® Cart's Innovative Features

The FIRST TeleView® Cart has been meticulously designed to streamline telehealth visits and video consultations. It embodies convenience, featuring 2-way HD video conferencing equipment that simplifies the operation for healthcare providers, enabling them to offer the best in virtual patient care.

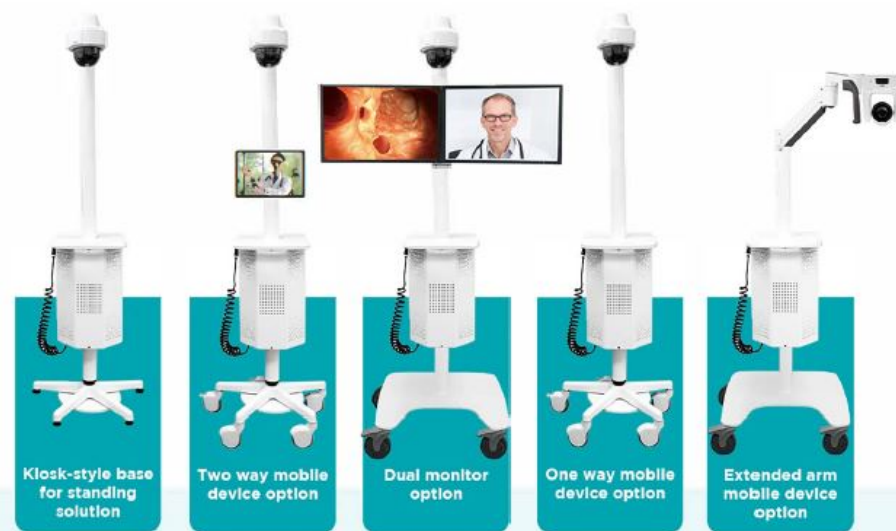

Tailoring Healthcare with Real-World Applications

Recognizing the diverse needs of patients and healthcare scenarios, the FIRST TeleView® Cart is adept at facilitating a wide range of telehealth services:

- **Routine Check-Ups:** Facilitating regular patient assessments with simplicity and increased frequency.
- **Specialist Consultations:** Bridging patients with specialists across the nation in real-time, significantly cutting down on travel times and expenses.
- **Follow-Up Appointments:** Ensuring continuous care and monitoring of patient progress post-treatment without the constraints of geographical boundaries.
- **Telesitting and Telemonitoring:** 2-way audio-video monitoring allows staff to monitor several patients remotely, ensuring safety and providing timely interventions. This functionality is key for managing patients with higher needs. It reduces the strain on physical staffing while maintaining high care standards.

This versatility not only exemplifies the cart's pivotal role in telehealth but also First Products Inc.'s foresight in catering to the nuanced challenges of healthcare delivery.

Impacting Clients and Shaping the Future of Telehealth

The deployment of the FIRST TeleView® Cart has positively impacted the healthcare ecosystem:

- **Enhancing Patient Experience:** By reducing the need for in-person visits, patients enjoy timely care in the comfort of their homes.
- **Streamlining Healthcare Provider Workflows:** Healthcare professionals can leverage the cart to optimize their schedules, thereby seeing more patients and reducing the overall patient wait times.
- **Expanding Reach to Underserved Areas:** With these mobile carts, healthcare services can now be extended beyond conventional boundaries, directly addressing staff shortages and healthcare access disparities.

Overall, when the situation calls for time-effective remote patient monitoring, the TeleView® cart is an essential addition to [a facility's telemedicine hardware](#).

Designing Perfect Fit Carts for Specialized Healthcare Needs

First Products Inc. deeply understands the unique challenges healthcare facilities face. That's why they work with clients to create 'Perfect Fit' carts. Clients are walked through a 4-step customization process for the FIRST TeleView® Cart and all their mobile carts to meet the facility's specific needs:

1. **Needs Analysis and Consultation:** This process begins with a comprehensive needs assessment and consultation to pinpoint precise requirements.
2. **Design and Engineering:** Following this, their talented design and engineering team crafts mobile cart solutions that are not just functional but also cater to the user experience, integrating state-of-the-art technology with innovative design.
3. **Prototyping and Pilot Programs:** To ensure satisfaction and practicality, First Products engages clients in prototype development and pilot programs, offering the opportunity to refine the carts before widespread implementation.
4. **Manufacturing and Logistics:** The entire journey culminates in the meticulous manufacturing and logistics phase. This ensures each customized solution is delivered on time and to the highest quality standards, so the client is ready to utilize the advanced telehealth capabilities.

About First Products Inc.

Since its inception in 1945, First Products Inc. has stood at the forefront of healthcare innovation.
